TIZO3 Tinted Mineral Facial Primer SPF 40	\$35	1.8
TIZO Sheer Foam Non-Tinted Sunscreen SPF 30	\$35	3.5

# Clinically™ Clear

## OUR SERVICES

**Consultation + skin analysis (complimentary):** A 20-30-minute meeting we request of all new clients before their first treatment. We will look at your skin under our magnifying lamp and ask questions to learn about your skin concerns, health history, and allergies. We then make recommendations for your in-office treatment plan and home care regimen. New clients may pair the consultation with one of our facial treatments (described below).

**30 minute facial treatment (\$90):** An express appointment consisting of a thorough cleansing, exfoliation (enzymatic or superficial chemical peel), light extractions, and sun protection.

**45-minute facial treatment (\$115):** Our most popular treatment. Includes a double-cleansing, enzymatic exfoliation or superficial chemical peel, and full-face extractions as needed. Typically concludes with the high-frequency modality to treat stubborn acne, calm inflammation, and increase circulation. You'll leave with soothing products and sun protection (daytime).

**60-minute facial treatment (\$130):** Allows more time for additional exfoliation, extensive extractions, and additional modalities (such as a soothing or treatment mask). There may be options to add or substitute other areas of focus (ex: back or chest) during this time; please talk to your therapist.

**Dermaplaning (\$125):** An exfoliating treatment in which your therapist uses a tiny scalpel to gently scrape away the dead skin and vellus hairs (aka peach fuzz) from your face. Dermaplaning reveals incredibly bright, soft skin that lasts for weeks. Combining dermaplaning with enzymatic exfoliation delivers even more pronounced results. Important: we cannot dermaplane active acne; clients with significant breakouts, cold sores, dermatitis, or hirsutism should avoid dermaplaning.

**ViPeel chemical peel (\$250):** This is the award-winning medical-grade peel containing a blend of powerful ingredients that help to improve skin tone, texture, and clarity. This peel is sub-dermal, meaning it peels more than just the top layer of skin to reveal "baby skin". There are several types of ViPeels to address just about any skin concern including acne, scarring, fine lines and uneven pigment. Most clients notice results after one peel, but a series of three-to-four yields maximum results.

**Microdermabrasion (\$60):** This procedure exfoliates and removes the superficial layer of dry, dead skin cells by buffing and polish the skin using a wand with a diamond tip. Clients with fine lines, uneven pigmentation, or clogged pores may benefit most from a series of microdermabrasion treatments.

**Back or chest treatment (\$115+):** Yes, we treat that. The skin here is often able to handle more aggressive peels and homecare ingredients. The time it takes (and our fees) vary based on the size and severity of the area that needs treatment; please talk to your therapist. For clients on our treatment series, we can often extend the time for your facial treatments for a small fee.

**Emergency Extractions (\$50):** We are passionate about this: please stop picking at your acne! If you are an existing client and have a surprise acne spot in between facial treatments, please stop by and let us take care of it for you. Leave it to the experts - if it can be safely extracted, we will do that with much lower risk of bruising or scarring. This service is complimentary for clients on our treatment series.

**Celluma LED therapy (\$40):** LED light therapy uses specific wavelengths of light energy to improve cellular health by accelerating the repair and replenishment of compromised tissue cells. It has a range of applications from healing acne to anti-aging and pain management. Our Celluma device alternates red and blue light to kill acne bacteria and calm inflammation (red and near-infrared are also for anti-aging). Celluma is uniquely flexible and able to conform closely to the treatment area for optimal efficacy. Simply put, the closer the lights are to the skin the more effective they are. This service is complimentary for clients on our treatment series.

**Microneedling/Microchanneling (coming soon!):** Microneedling can treat acne scars and reduce the appearance of large pores, wrinkles, sun damage, and stretch marks. The procedure uses tiny needles to create multiple tiny punctures across the skin. The punctures are intended to create enough tissue damage to trigger increased collagen production and other healing factors from within the deeper layers of your skin. It also creates the opportunity to push topical medications, such as Vitamin C, tretinoin, or PRP deeper into the skin. Most clients notice an improvement in their skin within one treatment, though it usually takes multiple treatments to reach your goals and create the intended effect.
